

- Develop a Java program to create a class student with members usn, name, an array credits and an array marks. Include methods to accept ^{display details} and a method to calculate SGPA of a student.

```
import java.util. Scanner;
```

```
class Student {
    String usn;
    String name;
    int [] credits = new int [8];
    int [] marks = new int [8];
    public void acceptDetails() {
        Scanner scanner = new Scanner(System.in);
```

and c

```
        System.out.print("Enter USN : ");
        usn = scanner.nextLine();
        System.out.print("Enter Name : ");
        name = scanner.nextLine();
```

3

```
        System.out.println("Enter details for each
        subject : \n");
```

4c

```
        for (int i = 0; i < credits.length; i++) {
            System.out.print("\n Enter credits for
            Subject " + (i+1) + " : ");
            credits[i] = scanner.nextInt();
            System.out.print("\n Enter marks for
            Subject " + (i+1) + " : ");
            marks[i] = scanner.nextInt();
```

}

```
        scanner.close();
```

}

```

public double calculate SGPA () {
    int totalCredits = 0;
    int weightedSum = 0;
    double ans;

```

```

    for (int i=0; i < credits.length; i++) {

```

```

        totalCredits += credits[i];

```

```

        int gradePoints;

```

```

        gradePoints = (marks[i] / 10) + 1;

```

```

        if (gradePoints == 11) {

```

```

            gradePoints = 10;
        }

```

```

        else if (gradePoints <= 4) {

```

```

            gradePoints = 0;
        }

```

```

        weightedSum += gradePoints * credits[i];
    }

```

```

    ans = (double) weightedSum / (double) totalCredits;
    return ans;
}

```

```

public void displayDetails () {

```

```

    System.out.println("In Students Details : ");

```

```

    System.out.println("USN : " + usn);

```

```

    System.out.println("Name : " + name);
}

```

```

public class sgpa {
    public static void main (String [] args) {
        Scanner scanner = new Scanner (System.in);
        Student student = new Student ();
        student.acceptDetails ();
        student.displayDetails ();

        double sgpa = student.calculateSGPA ();
        System.out.println ("SGPA : " + sgpa);
        scanner.close ();
    }
}

```

→ Output :-

Enter the Student USN : 1BM22CS011

Enter the Student Name : ADARSH DEV SINGH

Enter the subject Details :

Enter the credits of subject 1: 4

Enter the marks of subject 1: 92

Enter the credits of subject 2: 4

Enter the marks of subject 2: 93

Enter the credits of subject 3: 3

Enter the marks of subject 3: 97

Enter the ~~marks~~ (credits) of subject 4: 3

Enter the marks of subject 4: 95

Enter the credits of subject 5: 3

Enter the marks of subject 5: 92

Enter credits & marks of subject 6: 3 91

Enter credits & marks of subject 7: 1 85

Enter credits & marks of subject 8: 1 82

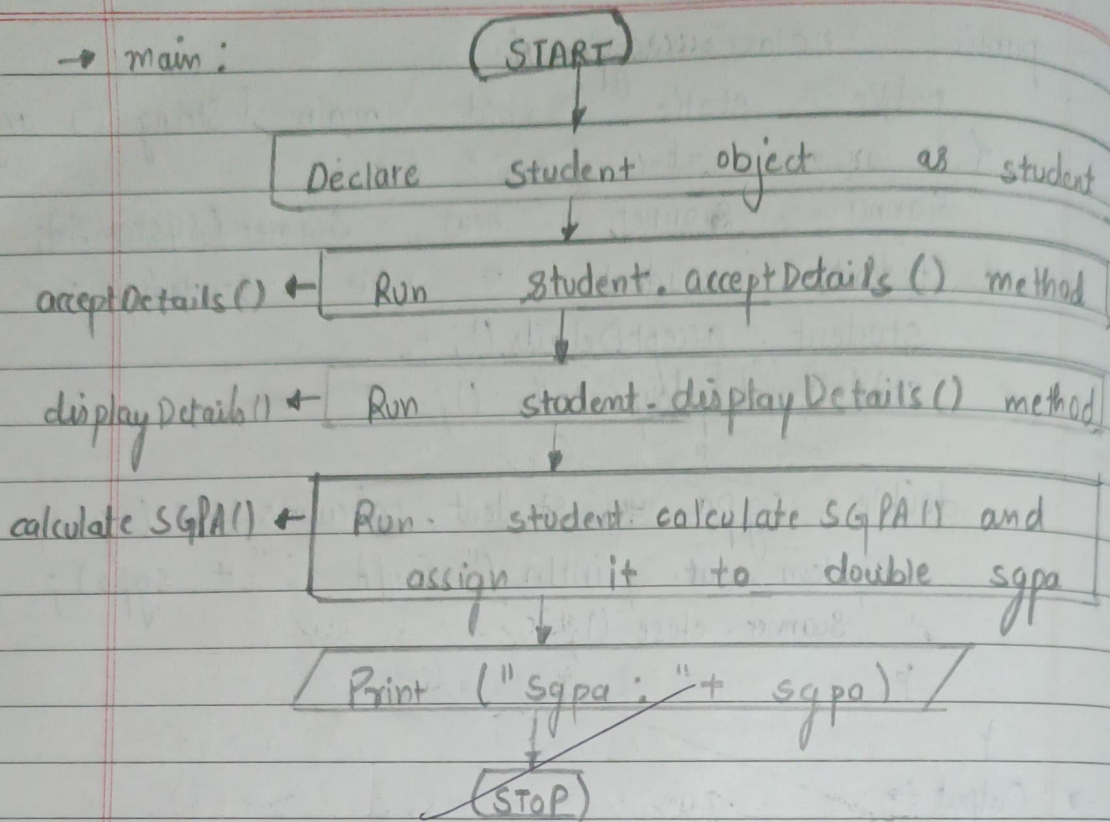

Student Details :

The Student USN: 1BM22CS011

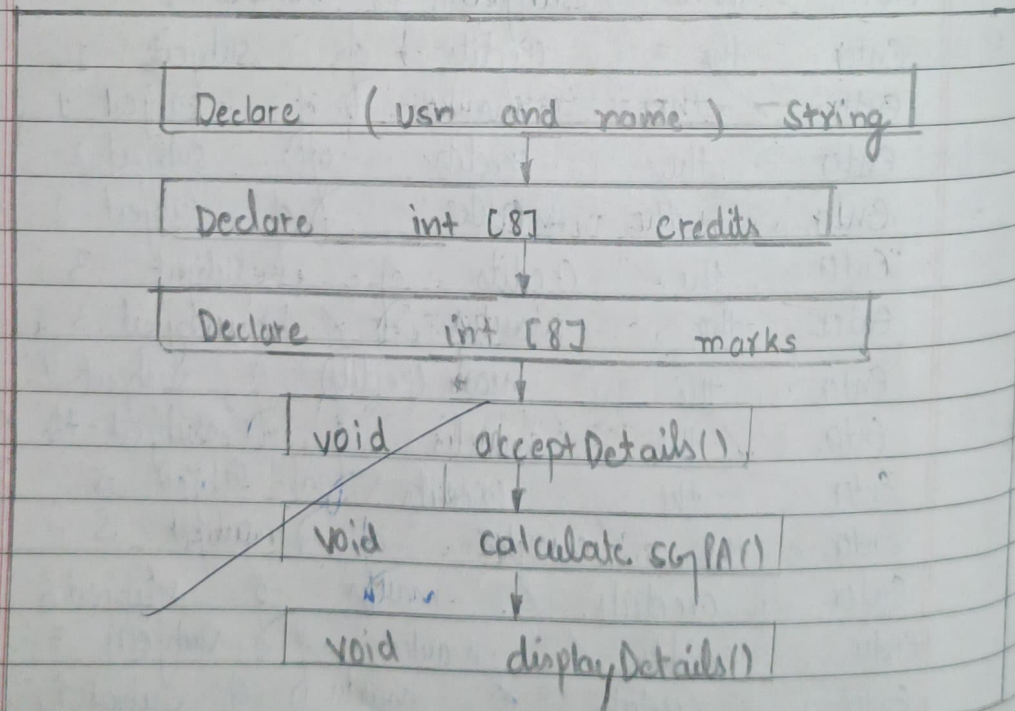

The Student Name: ADARSH DEV SINGH

SGPA : 9.9

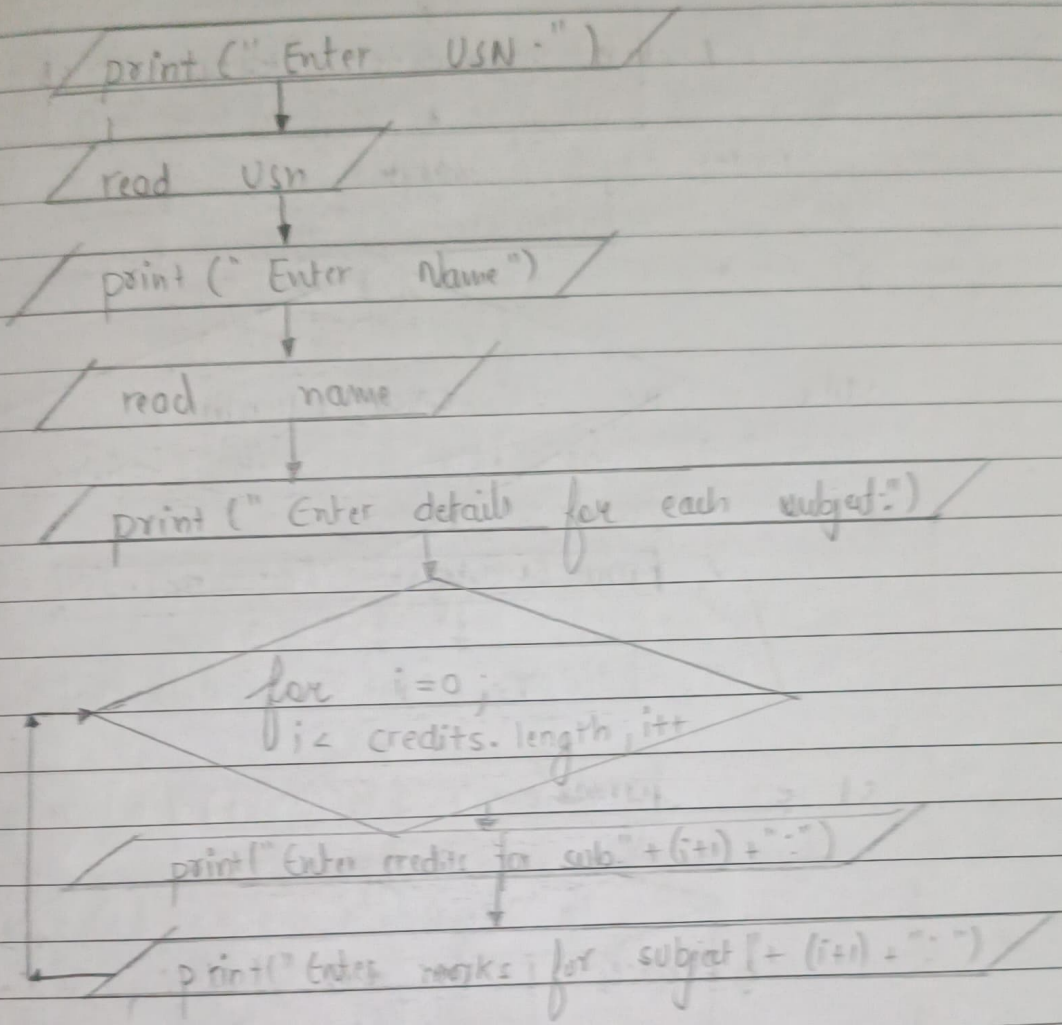

→ main :

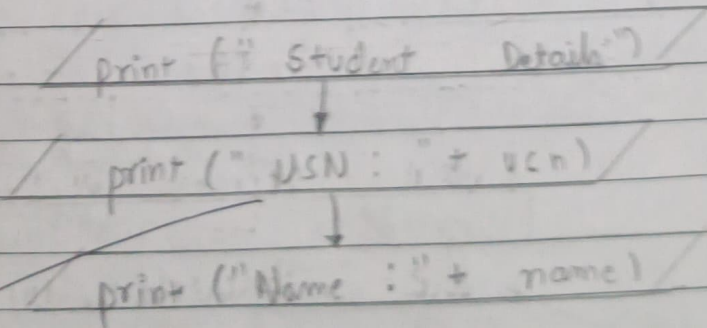

→ class Student :

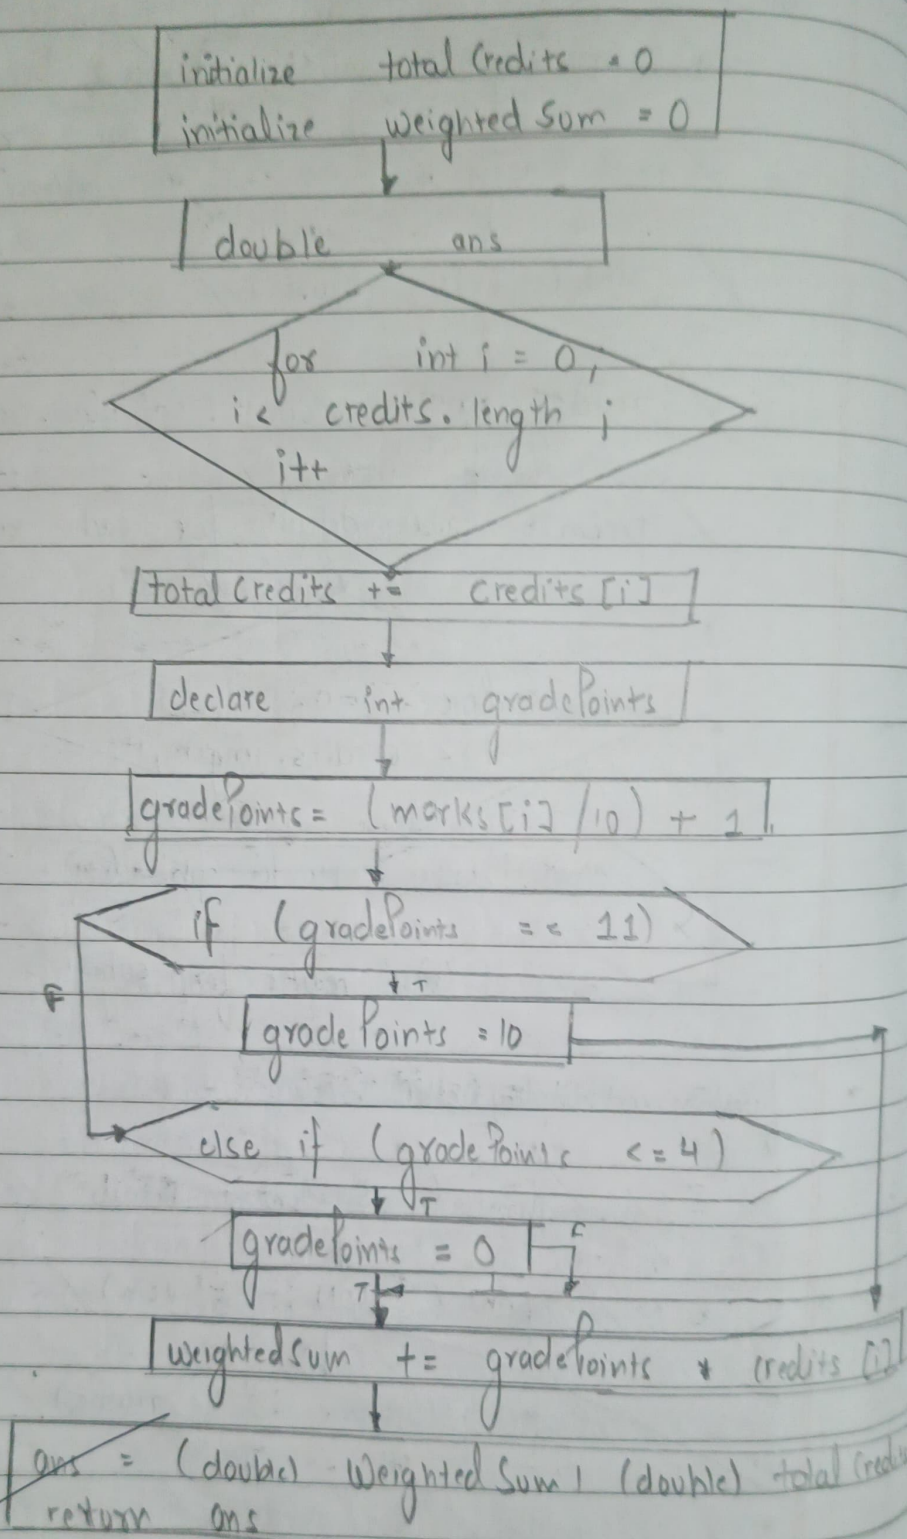

→ function void acceptDetails:

→ function void displayDetails:

function void calculate SGPA ()
